Investment Commentary April 2024

Market Summary

The International Monetary Fund (IMF) upgraded the global economic growth forecast by 0.1% to 3.2% this year and in 2025. For advanced economies, the growth rate is expected to rise from 1.6% in 2023 to 1.7% in 2024 and 1.8% in 2025. However, emerging markets and developing economies are expected to experience a modest slowdown from 4.3% in 2023 to 4.2% in both 2024 and 2025.

The European Central Bank (ECB) kept its interest rate unchanged at an all-time high of 4.0%. The Governing Council (GC) is determined to ensure that inflation returns to its 2% medium-term target in a timely manner. It considers it key that ECB interest rates are at levels that substantially contribute to the ongoing disinflation process. Meanwhile, at its latest monetary policy meeting, the Bank of Japan kept interest rates unchanged at 0-0.1%.

US-China trade tensions remained high as the US urged Japan, South Korea, Netherlands, and its allies in Europe to tighten restrictions regarding chip-related technology exports to China amid rising concerns about Huawei's development of advanced semiconductors.

Credit agency Fitch downgraded their outlook on China's long-term credit, known as Issuer Default Rating (IDR), from 'stable' to 'negative,' citing uncertain economic prospects as the country moves away from property-reliant growth. Fitch highlighted that "wide fiscal deficit and rising government debt in recent years have eroded fiscal buffers from a rating perspective." However, Fitch kept China's IDR unchanged at A+.

Explanatory notes

1. Returns are before management fees and tax. All returns greater than 1 year have been annualised.
2. Overseas Sectors - returns are in NZ\$ and exclude the effects of currency hedging on equities, but include the effects of currency hedging on global property, global bonds and absolute return funds.
3. Property - the returns in this table are influenced by the allocation to direct investment and holdings in listed vehicles. In the case of direct investment, the valuation approach and timing adopted by the manager will influence the returns.
4. Risk Statistics (all are annualised using monthly data):
Vol = Volatility = standard deviation of monthly fund returns
VA = Value Added = Return (fund) minus Return (index)
TE = Tracking Error = standard deviation of monthly Value Added
IR = Information Ratio = Value Added divided by Tracking Error
SR = Sharpe Ratio = [Return (fund) - Risk Free Rate]/ Volatility (Fund)
Wherever possible the risk statistics are calculated using each fund's actual benchmark.
